Model-driven engineering (MDE) is a software development methodology that focuses on creating and exploiting domain models, which are conceptual models of all the topics related to a specific problem. Hence, it highlights and aims at abstract representations of the knowledge and activities that govern a particular application domain, rather than the computing (i.e. algorithmic) concepts.

Figure 2: While each project can have a unique set of risks, it is possible to generalize by domain.

Prototypical risks are ones that are common in a domain and are a reason that software development practices vary by domain.

A Risk-Driven Model for Agile Software Architecture

The engineering design process is a methodical series of steps that engineers use in creating functional products and processes. The process is highly iterative - parts of the process often need to be repeated many times before another can be entered - though the part(s) that get iterated and the number of such cycles in any given project may vary. ...
