Deuterium (or hydrogen-2, symbol D or 2H , also known as heavy hydrogen) is one of two stable isotopes of hydrogen (the other being protium, or hydrogen-1). The nucleus of deuterium, called a deuteron, contains one proton and one neutron, whereas the far more common protium has no neutron in the nucleus. Deuterium has a natural abundance in Earth's oceans of about one atom in 6420 of hydrogen.

David Joseph Bohm FRS (/ b oËš m /; December 20, 1917 – October 27, 1992) was an American scientist who has been described as one of the most significant theoretical physicists of the 20th century and who contributed unorthodox ideas to quantum theory, neuropsychology and the philosophy of mind.. Bohm advanced the view that quantum physics meant that the old Cartesian model of reality ...

PPI. The first fusion reaction to occur in the collapsing cloud is deuteron-proton fusion, the third line in table 1. This happens because there is a small background abundance of deuterons in the cloud already.

Abstract. Escherichia coli strain BL21 is commonly used as a host strain for protein expression and purification. For structural analysis, proteins are frequently isotopically labeled with deuterium (2H), 13C , or 15N by growing E. coli cultures in a medium containing the appropriate isotope. When large quantities of fully deuterated proteins are required, E. coli is often grown in minimal ...
