Electrokinetic phenomena are a family of several different effects that occur in heterogeneous fluids, or in porous bodies filled with fluid, or in a fast flow over a flat surface. The term heterogeneous here means a fluid containing particles. Particles can be solid, liquid or gas bubbles with sizes on the scale of a micrometer or nanometer. [citation needed] There is a common source of all ...

Sediment transport is the movement of solid particles (ρ_s), typically due to a combination of gravity acting on the sediment, and/or the movement of the fluid in which the sediment is entrained. Sediment transport occurs in natural systems where the particles are clastic rocks (sand, gravel, boulders, etc.), mud, or clay; the fluid is air, water, or ice; and the force of gravity acts to move the ...

Here's the "real life," most robust and up to date neural cognition text available today, to add supplemental hard science to the numerous softer and more contemplative (less practically sim ready) "Kurzweil" like models, eg: (How to Create a Mind: The Secret of Human Thought Revealed. The book doubles as an "owners manual" for the author's Nengo neuro sim program (meaning Neural ENgineering ...

In conventional electrolysers with the classical plate-and-frame equipment (see Fig. 3), the feed channels are created by interposing between the membranes net spacers, maintaining a fixed inter-membrane distance and providing some mixing promotion in the channels. Spacers are provided with gaskets along the perimeter of the channels, which seal the channels and guide the solutions through them.
